

QUICK SET LIQUID

PRODUCT DATA SHEET

GUNITE & SHOTCRETE ADMIXTURE IN LIQUID FORM.

DESCRIPTION:

Accelerating Admixture and waterproofing agent for wet Shotcreting.

USES :

Quickset Liquid is used for the production of high quality fast setting shotcrete (wet) and is highly economical.

- To secure loose and fragmented rock foundation during tunnel construction.
- To stabilize soil and rock faces.
- To secure subterranean excavations.

ADVANTAGES:

- Quickset liquid increases internal cohesion of shotcrete and adhesion to substrate.
- Significantly reduces the rebound of the gunite mix.
- Results in dust free surfaces.
- Produces high strength and dense concrete.

APPLICATION:

Quickset Liquid has to be added by means of a dispensing pump suitable for wet spray method. The dosage varies from 4 to 10% by weight of cement. Setting time may vary if different cement brand & different grade is used.

PROPERTIES:

Form	Light bluish/ yellowish liquid
Specific Gravity	1.39 ± 0.02 at 27 deg. C
Setting time (As per ASTM using Gillmore apparatus)	Initial setting time 1 to 3 Min. Final setting times not more than 12 Min.
