

QUICKSET POWDER

PRODUCT DATA SHEET

GUNITE & SHOTCRETE ADMIXTURE IN POWDER FORM.

DESCRIPTION:

Accelerating Admixture and waterproofing agent for dry Shotcreting.

USES:

- **Quickset Powder** is used for the production of high quality fast setting shotcrete and is highly economical.
- To secure loose and fragmented rock foundation during tunnel construction.
- To stabilize soil and rock faces.
- To secure subterranean excavations.

ADVANTAGES:

- **Quickset Powder** increases internal cohesion of shotcrete and adhesion to substrate.
- Significantly reduces the rebound of the gunite mix.
- Results in dust free surfaces.
- Produces high strength and dense concrete.

APPLICATION:

Quickset Powder normally between 2 to 4 % by weight of cement. When increased to 5 to 6 %, setting is quicker and curing time is much reduced.

PROPERTIES:

Form	Free flow white powder
Setting time (As per ASTM using Gillmore apparatus)	Initial setting time 1 to 3 Min. Final setting times not more than 12 Min.
