An ISO 9001 : 2000 Company

MANUFACTURER OF CONSTRUCTION CHEMICALS

SETCURE RAP

PRODUCT DATA SHEET

SETCURE RAP IS RESIN BASED ALUMINIUM PIGMENTED CONCRETE CURING COMPOUND.

DESCRIPTION:

Setcure RAP is a pigmented lacquer type concrete curing compound to prevent premature water loss from concrete. It is based on synthetic film forming resin and leafing grade micro fine Aluminium pigment. The excellent reflection of sunrays from Aluminium surface to dissipate heat is an added advantage. It is a very fast setting compound- the organic solvent helps to form a tough resin film within two hours.

USES:

Setcure RAP is sprayed or brushed on newly laid concrete surfaces to form a thin film barrier against premature water loss. Without hindrance to the normal curing phenomenon due to adequate hydration water held by the concrete matrix underneath and for negligible evaporation of water from below resin membrane the concrete achieves maximum beneficial properties.

ADVANTAGES:

Setcure RAP is very useful in large areas of exposed concrete such as

- Concrete highways – Road construction
- Air Port Runways
- Apron and hard standing
- Roof decks and shell-roofs
- Retaining walls
- Pre stressed beams and peers
- Canal Lining
- Exposed surfaces of dams
- Sloping and angular surface where pond curing is not possible

APPLICATION:

Setcure RAP curing compound recommended for application once the surface water has disappeared. As it is solvent based, the equipments are to be cleared with Mineral Solvents, such as white spirit, kerosene oil, etc. soon after completion of Job. It is recommended to stir the contents of container before application and to keep the product away from flame and heat under shade.
