

EASTERN SETCRETE *Private Limited*

An ISO 9001 : 2000 Company

MANUFACTURER OF CONSTRUCTION CHEMICALS

SETCURE WP

PRODUCT DATA SHEET

SETCURE WP IS PARAFFIN WAX BASED PIGMENTED CONCRETE CURING COMPOUND.

DESCRIPTION:

Setcure WP is liquid concrete curing compound to prevent premature water loss from concrete. It is based on micro crystalline Paraffin wax emulsion pigmented with titanium – di – oxide for Superior reflection of Sunrays to dissipate surface heat.

USES:

Setcure WP is sprayed or brushed into newly laid concrete surfaces to form a thin film barrier against premature water loss. Without hindrance to the normal curing phenomenon due to adequate hydration, water held by the concrete matrix and for very slow evaporation of water from below membrane the concrete achieves maximum beneficial properties.

ADVANTAGES:

Setcure WP is useful in large areas of exposed concrete such as

- Concrete highways – Road construction
- Air Port Runways
- Apron and hard standing
- Roof decks and shell-roofs
- Retaining walls
- Pre stressed beams and peers
- Canal lining
- Exposed surfaces of dams
- Sloping and angular surface where pond curing is not possible

APPLICATION:

Setcure WP curing membrane is recommended for application to the newly laid concrete once the Surface water has disappeared. For large areas of concrete such as concrete Highway, Power driven automatic spray equipment attached to paver machine is employed. The contents are to be stirred well before application as in Paints application.
